# 1. Real interest rate

- Numerical example
- Fisher equation

$$i = r + \pi$$

- Fisher effect

$$\uparrow \pi \Rightarrow \uparrow i$$

- Lucas paradox

RG Hubbard, AP O'Brien, M Rafferty (2012): Macroeconomics, p. 204

### Real and Nominal Interest Rates (Three-Month Treasury Bill), 1955–2010

Nominal and real interest rates often do not move together. When U.S. nominal rates were high in the 1970s, real (ex ante) rates were actually extremely low—often negative.

Frederic S Mishkin (2011): *Macroeconomics. Theory and practice*, p. 40

# Central bank action has come at the end of a 30-year period of declining real and nominal interest rates

## Long-term interest rates in developed economies

Yield to redemption on long-term government bonds, 1975–2012

%, GDP-weighted average

[http://www.mckinsey.com/insights/economic\\_studies/ge\\_and\\_ultra\\_low\\_interest\\_rates\\_distributional\\_effects\\_and\\_risks](http://www.mckinsey.com/insights/economic_studies/ge_and_ultra_low_interest_rates_distributional_effects_and_risks)

1 Ten-year government bonds, where available, for Australia, Canada, France, Germany, Italy, Japan, South Korea, Spain, the United Kingdom, and the United States.

2 Ex-post real values calculated as nominal yield on ten-year bonds in current year minus average realized inflation over next ten years. IHS Global Insight inflation estimates used for 2012–22.

# The Fisher effect

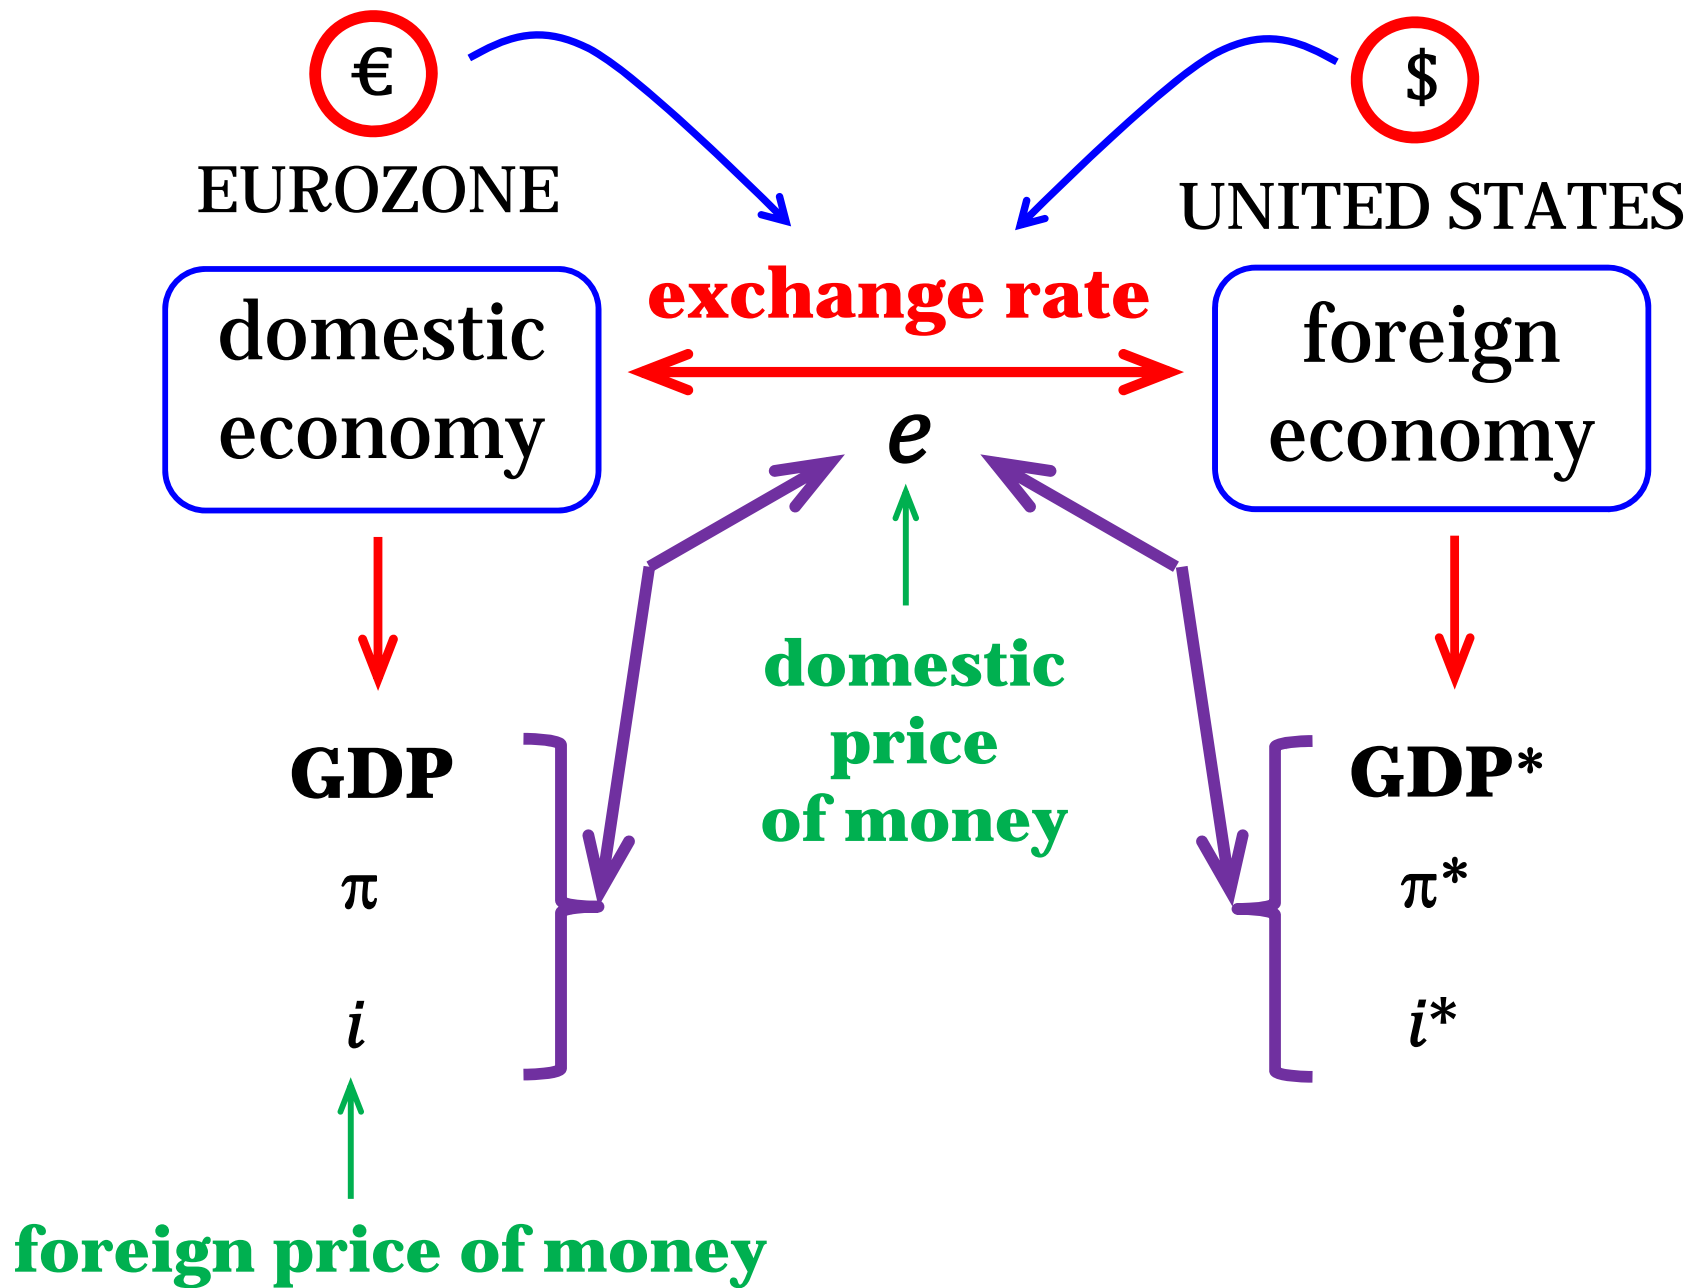

① A rise in the inflation rate boosts the demand for liquidity, as more money is needed to buy the same goods.

② The rise in the inflation rate also induces lenders to ask more for a loan.

# The Lucas paradox

## 2. Exchange rate

- Definition: relative price between two currencies
- Direct and indirect quotation
- Appreciation / depreciation
- Characteristics of the currency market: largest and most liquid market in the world

**Exchange rate USD/EUR (4 Jan 1999 – 13 Mar 2015)**

<http://www.ecb.int/stats/eurofxref/eurofxref-hist.zip>

**Exchange rate USD/EUR (4 Jan 1999 – 13 Mar 2015)**

<http://www.ecb.int/stats/eurofxref/eurofxref-hist.zip>

**Exchange rate JPY/EUR (4 Jan 1999 – 13 Mar 2015)**  
<http://www.ecb.int/stats/eurofxref/eurofxref-hist.zip>

**Exchange rate CNY/EUR (1 Apr 2005 – 13 Mar 2015)**

<http://www.ecb.int/stats/eurofxref/eurofxref-hist.zip>

### 3. The currency market model

- Supply of euros: by Europeans (demand dollars)
- Demand for euros: by Americans (supply dollars)
- Equilibrium exchange rate  $e^*$
- Comparative statics: impact on  $e^*$  of a change in
  - domestic GDP
  - foreign GDP
  - domestic inflation
  - foreign interest rates

$$\uparrow \text{GDP}_{\text{EU}} \Rightarrow \uparrow \text{IM}_{\text{EU}} \Rightarrow \uparrow D_{\$} \Rightarrow \uparrow S_{\text{€}} \Rightarrow \downarrow e$$

$$\uparrow \text{GDP}_{\text{US}} \Rightarrow \uparrow \text{IM}_{\text{US}} \Rightarrow \uparrow D_{\text{€}} \Rightarrow \uparrow e$$

$\uparrow \pi_{\text{EU}} \Rightarrow$ 
 $\begin{cases} \textcircled{1} \nearrow \uparrow \text{IM}_{\text{EU}} \Rightarrow \uparrow D_{\$} \Rightarrow \uparrow S_{\text{€}} \Rightarrow \downarrow e \\ \textcircled{2} \searrow \downarrow \text{IM}_{\text{US}} \Rightarrow \downarrow D_{\text{€}} \Rightarrow \downarrow e \end{cases}$

$\uparrow i_{US} \Rightarrow$ 

- ①  $\uparrow D_{US\text{-securities}}^{\text{BY EUROPEANS}} \Rightarrow \uparrow D_{\$} \Rightarrow \uparrow S_{\text{€}} \Rightarrow \downarrow e$
- ②  $\downarrow D_{EU\text{-securities}}^{\text{BY AMERICANS}} \Rightarrow \downarrow D_{\text{€}} \Rightarrow \downarrow e$

## 4. Arbitrage and speculation

- Spatial arbitrage – integrates currency markets geographically
- Triangular arbitrage – integrates different currency markets
- Speculation
  - going short – you buy expecting a price fall
  - going long – you buy expecting a price rise

# Spatial arbitrage

€1  $\xrightarrow{\hspace{2cm}}$  \$3  $\xrightarrow{\hspace{2cm}}$  €1.5

€ are sold

\$ are sold

*New York*

*London*

# Triangular arbitrage

$$\frac{\$}{\text{€}} \frac{\text{¥}}{\$} > \frac{\text{¥}}{\text{€}} \quad \leftarrow \text{initially}$$

*with arbitrage*  $\rightarrow$

$\downarrow$     $\downarrow$     $\uparrow$

# Intervention in the currency market
